

New Feature Highlights

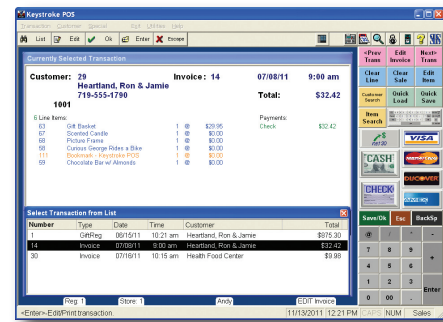

More Speed, More Flexibility, More Security

Versatile Transaction QuickView Feature

The new Transaction QuickView feature allows you to conveniently view the details of prior sales transactions as you scroll through the transaction list box. Instead of selecting a transaction to see line items and payment information, now you can quickly review multiple transactions without leaving the list box or discarding a transaction in progress.

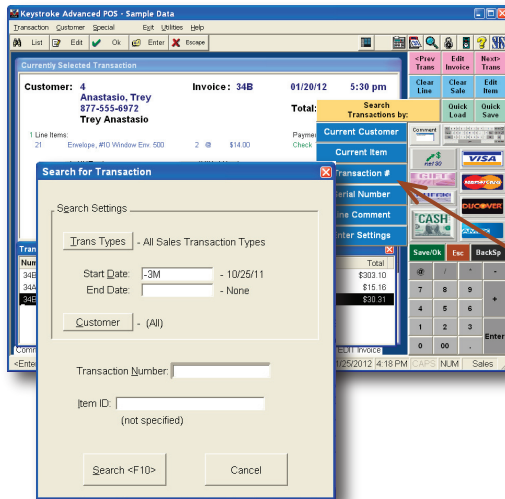

The QuickView screen layout is defined by an XML display file that can be customized to fit your business needs. Possibilities include:

- Add, remove, or change which data fields are displayed (Stock#, AltID#, etc.).
- Change text size, colors, and even fonts of labels and QuickView data.
- You can also define different QuickView display files for certain types of Transaction Searches (shown below).

Powerful New Transaction Search Function

Locate and review prior sales transactions faster and easier than ever!

Now you can instantly perform detailed searches across multiple Transaction Types (Invoices, Sales Orders, etc.) and use QuickView to see the results – all without leaving the sale in progress.

- Review the details of recent transactions for a Customer – such as to confirm the items they bought or prices paid.
- Easily peruse all sales, orders, and quotes that include a specific item.
- Locate and review all related transactions with the same Transaction Number – e.g., multiple Invoices originating from a single Order.

New Transaction Search Macros and Toolbars (Advanced Only)

Macro-based Search tools enable even more Search capabilities!

- Search transactions for the current Item, Customer, or Transaction# directly from a list box or data record – without leaving the list or record.^{AO}
- Quickly locate the sale of a specific Serial Number.^{AO}
- Find transactions where a Line Item Comment contains text such as a delivery address or other unique information.^{AO}

^{AO} **Advanced Only** – Features marked “AO” are available only in Keystroke Advanced POS.

The menu-accessible ‘Search for Transaction’ function (shown immediately above left) is included in all Version 7.1 Keystroke products.

New Easy-To-Use Keystroke TouchScreen Editor!^{AO}

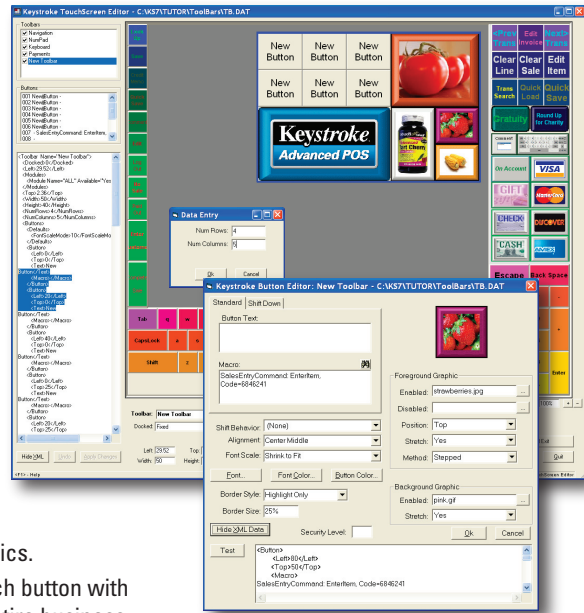

Now you can easily change or create your own Keystroke ToolBars with the new built-in TouchScreen Editor!

Transform the already highly functional Keystroke POS system into your own custom solution – coordinated with your favorite colors and business graphics. Add images to buttons and even create pop-up ToolBars for popular items or related tasks.

The Keystroke TouchScreen Editor will help bring your point of sale environment to life!

Capabilities include:

- ToolBars can be docked to a fixed screen location or popped up as needed such as the QWERTY keyboard or item buttons.
- Resize/stretch or expand existing ToolBars to add buttons.
- Zoom feature allows you to fine tune button placement and graphics.
- Easily create new ToolBars with a grid of buttons, then define each button with simple or complex Macros that will improve efficiency for your entire business.
- Import tool can be used to share ToolBars already created by other Keystroke users.
- TouchScreen capable monitor is 100% optional, since mouse input or hot-keys work equally as well.
- ToolBars and Buttons are easily resized and repositioned by dragging the mouse or changing property fields via keyboard – or, for maximum control or to quickly make multiple changes, directly modify the underlying XML code – all within the same editor!

Gratuity Payment Adjustments

Keystroke now handles customer gratuities with cash or credit card! Credit card payment amounts can be neatly adjusted prior to settlement.

Round Up for Charity

Easily facilitate your customers' desire to contribute their coin change to a charitable cause. Just touch or click a ToolBar button before tendering to round up the amount.

NonSale Items (aka, Hash Totals)

New NonSale Department setting allows you to designate items such as lottery tickets to be excluded from normal Sales Totals on closeouts and reports.

Purchasing Scripts^{AO}

Previously available only on sales, Keystroke's exclusive Transaction Scripts are now active in Purchasing too!

End-To-End Encryption for Payment Cards

Keystroke now includes support for end-to-end (E2E) encryption and tokenization using the readily available and affordable MagTek® IPAD® and IPAD® SC devices.

Looking for More?

Incremental program changes, corrections, and new capabilities are made to the Keystroke program on a regular basis. To learn about improvements made since the Version and Build you're currently running, please check out the following documents on the Software Updates page at www.KeystrokePOS.com!

WhatsNew – Complete descriptions of features and program changes grouped by topic (vs. chronology) in the latest Version of Keystroke POS and Keystroke Advanced POS.

ReadMe – A comprehensive chronological listing of all program changes, including corrections and new features.

**Questions or comments? – Call SBS at 800.359.3458
or your local Authorized Keystroke POS Dealer**

The Version 7.1 software update is included with all
Keystroke Software Maintenance Service plans.

Look for the **AO** to learn about features exclusive to Keystroke Advanced POS.
