

Keystroke™

Point Of Sale

Version 5.0 New Feature Highlights

The next major revision of **Keystroke POS** will be released this year, and will be a free upgrade for all registered users with a **Software Maintenance Service** expiration date on or after July 1, 2002.

- **New Customer Contact Database**

A parent/child-style relationship in the Customer database that offers diverse uses such as multiple ship-to addresses; and tracking purchases by employee, family member, project, or other criteria.

- **Customer & Inventory Enhancements**

New Customer database fields including Note (separate from Comment), and multiple Contact records with Age, Country, and Email; plus additional Date, Number, and Info fields.

New Inventory database fields include Location, default Sale Quantity, Last Counted Date, Last Printed Date, Average Lead Time, Weight, Rental, No Discount, and more.

Created and Last Modified Date fields have also been added to all databases, as well as a new Hide/Show function to mark inactive records.

- **Dept/Catg/Location Databases**

A new Location database provides a third way to group Inventory, similar to Category. New controls are also available in Department, Category, and Location databases including: Target Profit Margin, Minimum Age requirement (for age verification on liquor and tobacco sales), and Scripts.

- **Improved Security**

Gain added control with new Security Levels, improved Password encryption, a new Change Password function, and advanced Password controls including Minimum Length, Max Attempts, automatic expiration, and more.

- **New Report Engine/Editor**

New Report Engine – Provides improved flexibility in Reports, Labels, and Forms.

Report Editor – Adds the ability to make basic format changes to standard reports, and custom Report Forms. The Report Editor will be an added component of the **v5 User Bundle** and will not be sold separately.

- **More Transaction Types**

Added ability to modify behavioral characteristics of Invoices, Orders, Layaways, and Quotes. Plus new custom transaction types such as Gift Registry, Rental, Special/Service/Work Order, Quick Save/On-Hold, Recurring Charges, etc. Also, save Closeout details as transactions, with full edit and reprint capabilities.

- **New User Bundle Utilities**

Photo Viewer – Adds the ability to view a photo image of each inventory item within **Keystroke**.

Contract Pricing – Adds the ability to offer unique pricing per item per customer.

Keystroke to QuickBooks® Data Transfer Utility
A slick new way to transfer sales and other data directly to QuickBooks Pro 2002 or later.

- **Script Editor**

Start Sale and End Sale Scripts can be set up to run on every sales transaction, and master Scripts can be easily assigned to entire Departments, Categories, or Locations.

Plus a variety of new settings are available in Scripts including Run Once Per Transaction, Default Customer Only; plus new Script Types including Run Script from Item and Select Comments from Item. The Script Editor module is sold separately or as a component of the User Bundle.

- **And Much, Much More!**

Other improvements include OPOS support for customer displays and cash drawers; added support for Windows printer drivers; and new .INI file settings for advanced data file control.

Plus... virtually unlimited number of Print Buttons; custom lookup lists; definable date format; Re-sort function to reorganize inventory past the first 10 characters, and the list goes on! Please call if you have a question regarding a particular need or enhancement you've requested.

Note: While a DOS version of Keystroke POS will be maintained, some Version 5 features will be accessible only in the Windows version.
